

# Looking for synergies: experiences and challenges in crossing axes of inequality

## *The case of Cascais City, Portugal*

Within the framework of the Social Network of Cascais, a social diagnosis has been drawn up that will lay the foundations of the Social Development Plan for the coming years. The research analyzes social cohesion in relation to different areas (occupation, health, education, culture, etc.) and the situation of people, particularly the most vulnerable groups, taking into account different axes of inequality.
